

SuperGenie Chat Client

Release 1

The project is about
making an
ecommerce chat
client where people
order by chat.

Who are we?

Shaleen Garg

Student of CSE branch in IIIT Hyderabad. Leads the group in client and team interactions along with technical stuff.

Ashutosh Ranjan

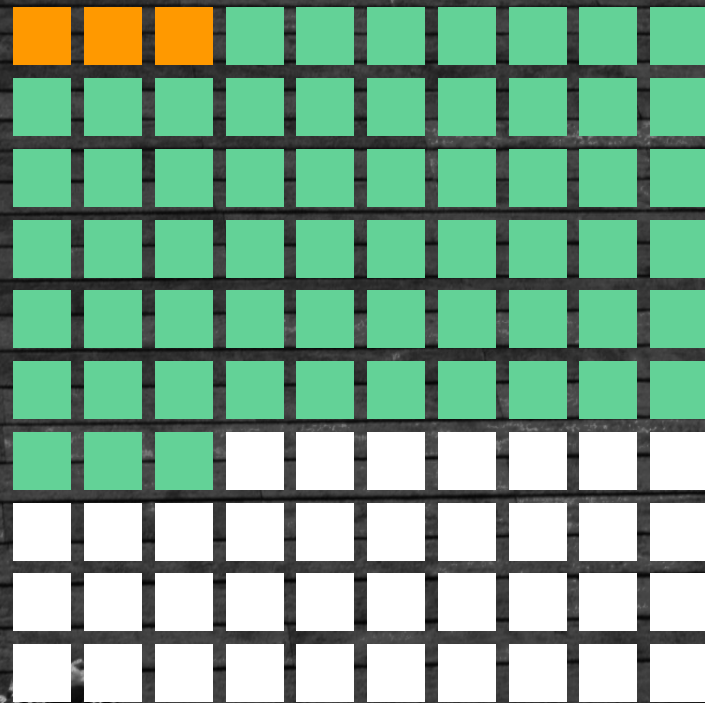

Student of CLD branch in IIIT Hyderabad. Supervises the activities of the group, mostly technical and documentation stuff.

Shreyash Shriyam

Student of CSE branch in IIIT Hyderabad. Manages functioning of the team primarily along with coding and documentation.

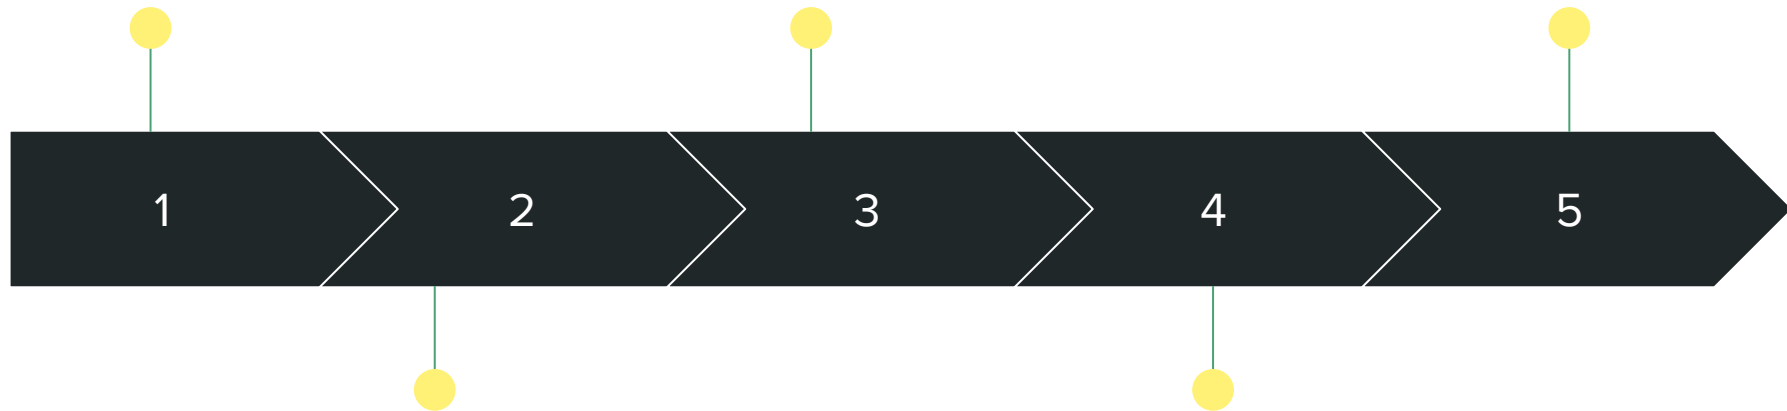

**+60% of the country
uses internet, but less
than 3% of population
has bought anything
online ever!**

Older people are not comfortable using internet.

Searching for the desired product/service takes a lot of time.

People are not sure if they would pick the right product.

The warmth and security we feel buying from shops is missing.

There are just too many websites to pick from, just too much chaos.

The solution

Make it easier

People who do not surf the internet daily are simply not used to it. Finding a website, searching for the product/service takes a lot of effort.

Why not just chat and order. That's where we come.

The solution

Make it easier

- Most people are familiar to chat, so ordering by chat becomes comfortable.
 - From multiple websites we pick the best possible option and then present it to them.
 - We save them the embarrassment and the chaos.
-

A hand is shown adjusting a slider on a mixing console. The background is blurred with bokeh lights. The text 'The Technology' is overlaid on the left side of the image.

The
Technology

AngularJs +
HTML + CSS +
Bootstrap

How it works

Step 1

Place Order/Request

Open the SuperGenie chat client, place a request.

The bot asks a few follow-up questions getting the details of your request

Step 2

Order Confirmation

Once you give the details, the bot gives you the available options/products/services .

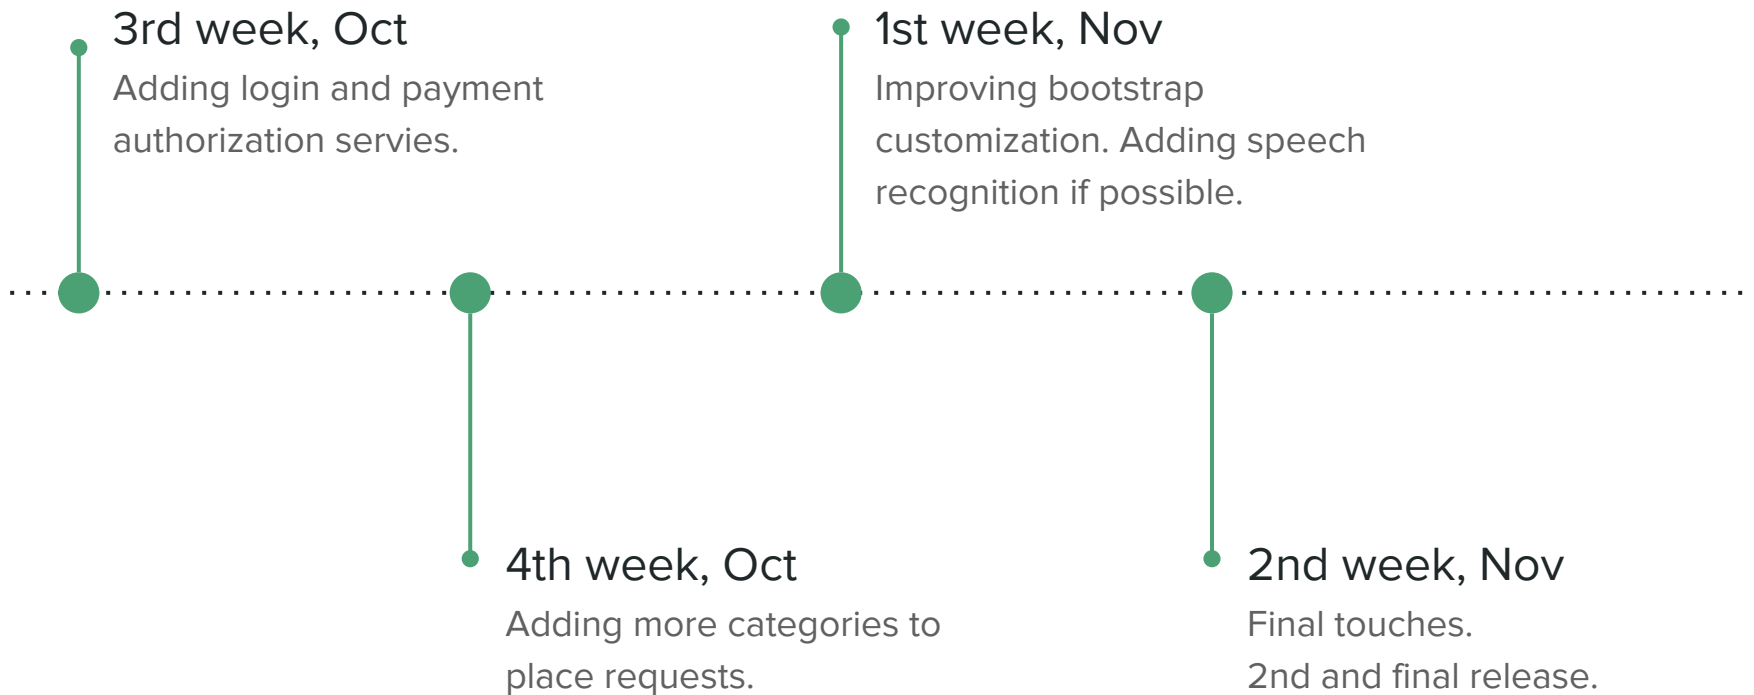

- You make the choice.

Step 3

Delivery

Then you make the payment via the payment authorization service.
In due time the product/service would be delivered to you.

Future Plans

Thank You
